

# Department of Fisheries and Oceans

**Organization:** Department of Fisheries and Oceans

**Technology Focus:** Telex C Soft and Dispatch consoles with IP224

**Duration of the project:** 2022 - 2023

Canadian Government Department of Fisheries and Oceans, Prairie Region, was looking for a new dispatch solution in order to connect with officers, located throughout its region of responsibility, from Alberta to Manitoba.

Cartel devised a solution that included Telex C Soft digital dispatch and IP224 radio interface connections to LMR radio, as well as satellite radio systems. Cartel's solution team was also responsible for connecting the dispatch centre located in Prince Albert, SK, to the dispatch centre located in Langley, BC, for seamless connectivity to neighbouring jurisdictions. The final solution includes a redundant C Soft position in the dispatch centre, offering full peace of mind not only for the dispatchers, but also officers located in remote locations throughout the region.
