

Calgary Airport

Organization: Calgary Airport Authority

Technology Focus: Radio System, Hyterra/
TETRA Technology

Duration of the project: 2015 - 2016

Radio is vital to support Calgary Airport Authority communications. It supports over 15 diverse Airport user groups, is a vital part of the emergency operations center and has 3 different dispatch locations.

The project consists of two components:

1. Radio System: Cartel focused on the procurement and installation of a radio solution as well as integrating with the Cisco's IPICs solution for the dispatching console requirements.
2. Radio Devices: Cartel addressed the procurement of the radios as well as implementation and operational readiness with the 15 stakeholder groups that have been identified.
